

Holmium laser Enucleation of Prostate (HoLEP)

Type of laser surgery used to treat obstruction (blockage) of urine flow as a result of benign prostatic hyperplasia (BPH) in which the prostate gland is not cancerous but has become enlarged

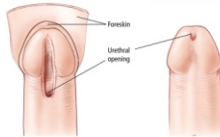

Ureteric reimplant

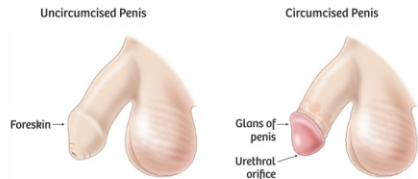

Surgery to fix the tubes that connect the bladder to the kidneys

Hypospadias repair

Surgery to correct a defect in the opening of the penis that is present at birth

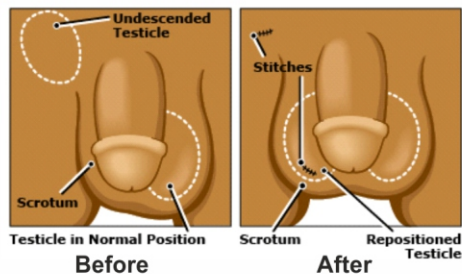

Circumcision

Removal of the foreskin from the human penis

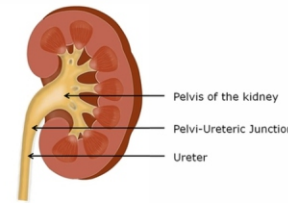

Orchiopexy (Orchidopexy)

Surgery to move an undescended (cryptorchid) testicle into the scrotum and permanently fix it there

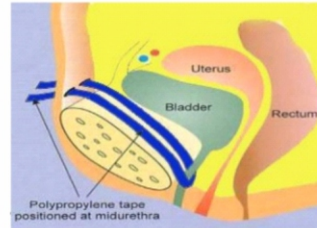

Pyeloplasty

Surgical reconstruction of a part of the kidney (renal pelvis) to drain and decompress the kidney

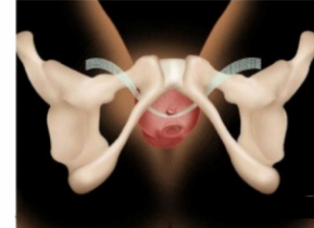

Tension-free vaginal tape (TVT) / Transobturator tape (TOT)

for stress urinary incontinence

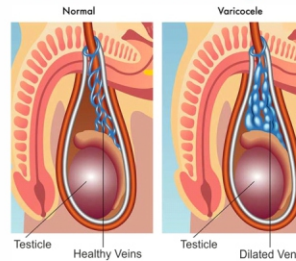

TVT

TOT

Varicocele

Surgery performed to remove enlarged veins and restore proper blood flow to reproductive organs

Urology is the branch of medicine that deals with diagnosis and treatment of disorders of the urinary tract (kidneys, adrenal gland, ureters, urinary bladder and urethra) in men and women, as well as the study of the male reproductive system (penis, testes, scrotum, prostate, etc.).

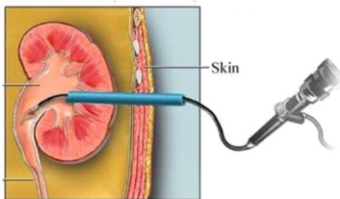

Urinary tract infections, urinary tract stones, prostate disorder, cancer involving urinary tract, involuntary loss of urine, erectile dysfunction, male infertility are treated under this branch. At KD Hospital the following services are available in the Urology department.

Extracorporeal shock wave lithotripsy (ESWL)

Very common, non-invasive method for treating stones in the kidney or ureter. It utilizes an energy source which generates a shock wave that is directed at the stone.

Percutaneous Nephrolithotomy (PCNL)

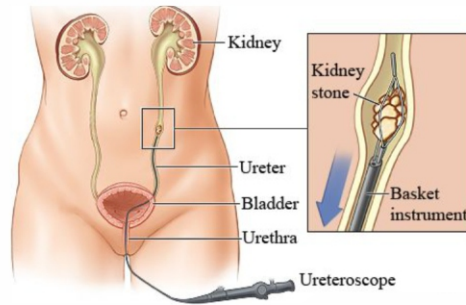

It is used to remove certain stones in kidney or upper ureter (tube that drains urine from kidney to bladder) that are too large for other forms of stone treatment.

Mini PCNL

Endoscopic procedure to remove kidney stones with minimum puncture

Ureteroscopy (URS)

Form of minimally invasive surgery in which laser is used to fragment the stone and remove it

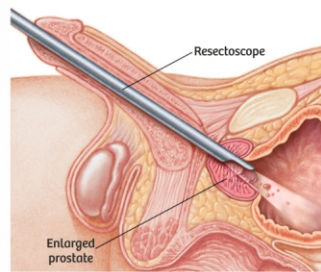

Flexible URS (RIRS)/Retrograde Intrarenal Surgery

A flexible ureteroscope is passed through ureter and reaches upto kidney to fragment the stone using laser energy. No incision is needed on the body.

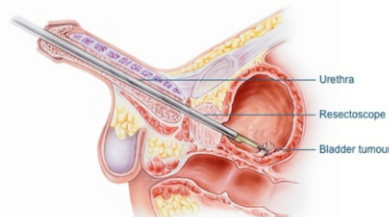

Transurethral resection of the prostate (TURP) - Monopolar/Bipolar

Surgical procedure that involves cutting away a section of the prostate through urethra

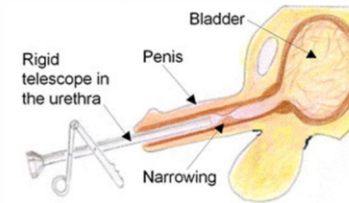

Transurethral resection of bladder tumour (TURBT)

Surgical procedure for removal of bladder cancer via endoscope through urethra

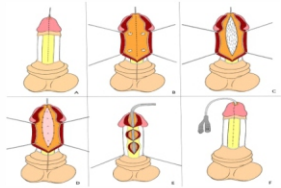

Visual internal urethrotomy (VIU) for urethral stricture

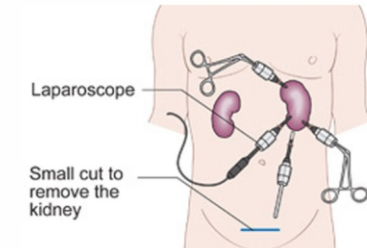

Surgery to repair a narrowed section (stricture) of the tube that carries urine from the bladder to the outside of the body (urethra)

Urethroplasty

Open surgical reconstruction or replacement of the urethra that has been narrowed by scar tissue and urethral stricture

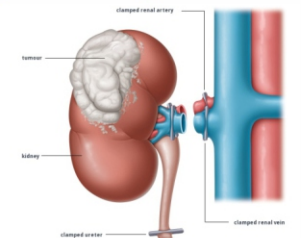

Laparoscopic Nephrectomy

Surgery that removes one or both kidneys through several very small incisions to the patient

Open Radical/Partial Nephrectomy

To treat renal cancer by removing entire/part of kidney that is affected by cancer

Laparoscopic or Open Radical Cystectomy

Surgical operation to remove the urinary bladder

Laparoscopic or Open Prostatectomy

Surgical procedure for partial or complete removal of prostate
